SUMMARY
I am seeking a career in Web Development. My background includes five years of network focused work and technical support. My current and former roles are deeply reliant on strong communication, attention to fine details, and time management skills which I successfully demonstrate. I graduated from a vocational school (Vantage College) and earned the following CompTIA certifications: Network+, Security+, and A+. I have two to three years of formal university coursework completed and have learned multiple computer languages at the University of Austin coding Bootcamp. These experiences have sharpened my skill set vastly.
